

About us

TONE Factory was started by young designers and vinyl lovers who shared a strong vision: to create a turntable produced in Europe that was not only affordable and easy to use but beautifully designed as well. We found that many people would love to listen to vinyl, but believe they have to buy a complete hi-fi system which is too expensive and complicated. TONE Factory wants to offer an easy solution for vinyl beginners and analog enthusiasts.

TONE Factory was developed for those who love vinyl and design. For those who enjoy coming home and relaxing to analog music. For those who buy vinyl but can't afford a complete hi-fi system. For those who like it slow but sometimes prefer the fast and easy way.

Design: Minimalist design without compromises in functionality.

Wireless: Connect any Bluetooth speaker and enjoy your records wireless. Or, integrate a TONE turntable into your existing hi-fi system.

Made in EU: Designed in Austria. Handcrafted in the Czech Republic by our experienced factory.

Connectivity

Our turntable offers two set-up possibilities. Option 1: Connect your TONE turntable with any Bluetooth speaker for easy, fast, and wireless vinyl listening. Option 2: Connect your TONE turntable with your classic hi-fi system to enjoy the best sound possible.

Design

We designed TONE turntable by rethinking every single part of a classic turntable. The aim was to create a minimalist turntable that is timeless and still stands out as a beautiful piece of furniture. For our outstanding and innovative design, TONE Factory received recognition from the Austrian Design Prize 2019.

The main difference from a regular turntable is our ingenious base. The circular base includes all technical parts like the motor and the Bluetooth module. At the same time it functions as the structural foundation of the turntable. All other parts, the chassis, and the platter sit on this base. Using this approach, we were able to achieve the super flat look of our turntable.

The square base chassis is carefully painted CNC-engineered MDF. On top of the chassis sits the platter. The platter is just thick enough to make lifting up the vinyl easy while still thin enough to maintain the sleek look.

The one-piece light-weight tonearm is made using a high-tech injection mold. The counterweight is cleverly integrated into the design. As thick as the tonearm but out of higher density material to ensure the perfect balance and tracking weight. The cartridge is the result of close cooperation with Ortofon, the Danish leader in high-end cartridges with over a century of history!

The design of our dustcover is as simplistic as the turntable itself. The high-quality acrylic lid has two very small attachments. You simply screw the attachment into the small holes on the back of your turntable by using the tool we provide. It is super easy - believe us!

Designed in Austria – Made in Europe

TONE Factory was designed and developed by three young designers in Vienna, Austria. We were able to work with engineers from the Austrian company Pro-Ject Audio Systems, who are world leaders in producing high-end turntables.

Our factory is in the Czech Republic only 200 km (125 mi) from Vienna. All parts are handcrafted leveraging over 50 years of turntable manufacturing experience. It is important to us that we stay close to the production in order for a true understanding of how our products are made and to ensure standards that are of the highest quality – not only for the materials used but also for the people and their working environment.
